

Bee Ware Background

Bee Ware aims to be the world's premier provider of secure web enabled delivery solutions with a reputation for thought leadership, expertise, capability and trustworthiness.

About Bee Ware

Founded in 2003, Bee Ware is the leading provider of secure web enabled delivery solutions. Built to Open Standards, Bee Ware's award-winning appliance based solutions ensure security, high performance and business continuity for the world's most demanding organisations. Headquartered in Aix-en-Provence, France, Bee Ware has operations throughout Europe.

Customers

Bee Ware products have been adopted by Global 2000 organisations including financial services firms, publishing and media, healthcare providers, pharmaceutical manufactures, and major government agencies. Customers include Barclays Bank, Clearstream, KBC Securities, Skyguide, Renault and EDF

Bee Ware Key Offerings

ICX™ - *Detection and analysis engine* - identifies, classifies and filters Web traffic. It is designed to detect both known or unknown application attacks as well as any malicious application usage. ICX includes proven positive and negative security models, transparent behaviour based Neural Network attack detection, Automated Process Detection and Web Services protection mechanisms.

i-Boost - *Optimising Performance and Security* – a solution for business critical applications and services that require high performance, quality of service, high availability, and robust security. i-Boost integrates seamlessly into any architecture without networking constraints. It supports both Transparent Proxy and Full Reverse Proxy modes.

i-Watch – *Application Attack & Vulnerability monitor* - is a low-cost hardened security appliance powered by break-through ICX Technology that plugs in any architecture and reports on an exceptional wide range of attacks and vulnerabilities without traditional update constraints – no need to maintain signature files or white and black lists.

i-Sentry – *Secure Application Gateway* - is a hardened security appliance protecting web and web services applications from 'known' and 'unknown' attacks exploiting bugs and vulnerabilities in both the web infrastructure and the application code. Its onboard gateway functionality provides appropriate response to stringent e-business demands in terms of improved performance, application delivery, business continuity and enhanced user experience.

i-Trust – *Flexible Web Single Sign-On (Web SSO)* - i-Trust is a strong, easy to use and affordable Web Single Sign On solution. The innovative idea introduced by Bee Ware is to use the Application Gateway as a primary Authentication Control Point. Running on the network perimeter, i-Trust agent first performs a secured perimeter authentication and then manages the application authentication.

Leadership Team

The senior management team has a strong record of driving rapid growth and financial success at technology organisations, bringing experience from leading companies such as Qualys, Check Point and AXIANS. They have a strong vision and experience in security design and application awareness
