## CETREL secures its Web infrastructure with Bee Ware

*Bee Ware's i-Suite plays a key role within the Luxembourg financial arena*

Paris, 26th April 2011 - Bee Ware, the specialist in secure Web application delivery, has reasserted both its position in the financial sector and its presence in the Benelux region by supporting CETREL in the initiative to protect its Internet infrastructure.

Located in Luxembourg, CETREL is synonymous with state-of-the-art electronic banking technology. Known for its expertise in the management of payment systems and automated banking operations, CETREL provides a range of value-added services built on stringent security criteria that also correspond to ground reality.

Because of the nature of their business, it is crucial for the organization to ensure the protection of their IT system, their Internet infrastructure and also their Website. Taking these imperatives into account the company looked towards an integrated solution that would enable it to efficiently ward off external attacks.

A prerequisite of the project consisted in identifying a solutions vendor who proved to be a pure player within the Web application security marketplace. The choice ultimately settled on i-Suite, the solution from Bee Ware. The deployment was handled by CETREL who managed the integration process from end-to-end.

In practice, i-Suite has shielded CETREL from various incidents including hacking and SQL injection attacks. The infrastructure thus benefits from complete protection.

The i-Suite platform from Bee Ware is a pioneering next-generation application security offering, designed to serve all IT infrastructures from the simplest to the most complex. Graphical workflow management from a user-friendly dashboard allows CETREL to easily and quickly create progressive security policies, that are both robust and compliant with specific requirements.

Sébastien Déboulet of the Security Department at CETREL endorses the solution: "We chose to deploy i-Suite following some significant infrastructure renovations. We have been using the solution for six years and are thoroughly satisfied with it. The systems comply with PCI-DSS requirements and we are happy with the management, agility and robustness afforded by the solution! "

Buoyed by the success of the initial rollout, CETREL is currently upgrading to the latest version of the product, i-Suite v5. This new development in the lifespan of the project is set to provide access to the latest innovations, such as the recently launched XML Firewall.

### About Bee Ware :

Bee Ware, the European provider of secure Web application delivery solutions, assures comprehensive business-smart protection for all organizations. With Bee Ware's integrated solution i-Suite companies have access to a web application firewall, access control, Web Single Sign On, an XML firewall, traffic monitoring and centralized management, making significant cost reduction and high-performance a reality. i-Suite scales to meet the requirements of appliance-based, Software as a Service or virtual machine deployment and adapts to all IT infrastructures. Bee Ware was founded in 2002 and its European presence is primarily shared among industry, healthcare, finance and public services.
