

Bee Ware's Best-of-Breed Web Single Sign On

Aix en Provence, 20th May 2010

Web application security specialist Bee Ware provides secure streamlined access to multiple applications while keeping costs down and ensuring ease of implementation.

Bee Ware's access control solution addresses corporate and public sector customers faced with ever-increasing security risks. The business applications deployed by major organisations are either developed in-house or by IT consultancies; either way, the strict authentication of users with access to sensitive data is a necessity, but turns out to be increasingly complex to manage.

With more login details to define and memorize, users naturally resort to simpler and less secure practice ; passwords become more predictable and are often scribbled on notepads or address books. Support services receive countless calls for help when access is denied due to mix-ups and errors.

Bee Ware's Web Single Sign On enables organisations to replace multiple authentications by a single identification credential per user. All the users across a network will be able to log on to their application sets after identifying themselves once at the start of a session. Highly efficient, the i-Trust module is also easy to implement. The solution is also non-intrusive and agent-free.

Other benefits of Bee Ware's WSSO include flexibility in adapting to diverse IT infrastructures, the capacity to grow with system upgrades via its integrated learning skills and user-friendly administration. i-Trust is part of the integrated i-Suite solution for unified security management.

Matthieu Estrade, Bee Ware Innovations Manager: « There is a certain degree of satisfaction attached to providing a Web SSO solution aligned to business requirements. When evaluating a solution, besides looking at its capacity to solve a technical issue, you have to consider global impact and factors such as total cost of ownership and the extra resources needed to drive and maintain it. Our offering is easy to set up, simple to manage and cost-effective. »

About Bee Ware:

Bee Ware, the leading provider of secure Web application delivery solutions, assures comprehensive business-smart protection for all organisations. With Bee Ware's integrated solution i-Suite, companies have access to a web application firewall, access control, Web Single Sign On, traffic monitoring and application assessment, a Web Services gateway and centralised management which make significant cost reduction and high-performance a reality. i-Suite scales to meet the requirements of appliance-based, Software as a Service or virtual machine deployment and adapts to all IT infrastructures.

Bee Ware was founded in 2002 and its European presence is primarily shared among industry, healthcare, finance and public services.
