Bee Ware's i-Suite now SaaS enabled

Aix en Provence, 16th June 2010

i-Suite by Bee Ware, the specialist in secure Web application delivery, is now proposed by the vendor as a fully managed service specifically geared towards hosted infrastructures.

The mechanics are simple. i-Suite traditionally assures the unified management of Web application delivery. The SaaS model is based on a shared and centralised architecture which offers all the business benefits generally associated with service subscriptions: reduced deployment time, low threshold investment and non-requirement of specific in-house skills.

Managed entirely by dedicated Bee Ware teams and applicable to all types of Web sites and applications, i-Suite SaaS eliminates the need for hardware and software installations. The solution offers exhaustive traffic filtering and performance optimisation services. Inbound traffic is inspected in real-time before it even reaches the application and malicious requests, including known and unknown attacks, suspicious requests, worms and scans, are immediately blocked. Not only does i-Suite ensure protection, it also contributes to Web server optimisation and performance management thanks to a few of its inherent features: cache, compression and SSL acceleration.

Marc VAILLANT, Bee Ware's CEO: « Web site owners are faced with the growth and omnipresence of cybercrime which constitutes a massive threat to their online activity, in terms of ROI and performance. It has become mandatory to include protection from the outset when setting up a hosted application. With i-Suite SaaS, our customers can focus on their business and make the most of our value-added turnkey service ».

i-Suite SaaS is distributed by Bee Ware in France and Europe.

About Bee Ware:

Bee Ware, the leading provider of secure Web application delivery solutions, assures comprehensive business-smart protection for all organisations. With Bee Ware's integrated solution i-Suite, companies have access to a web application firewall, access control, Web Single Sign On, traffic monitoring and application assessment, a Web Services gateway and centralised management which make significant cost reduction and high-performance a reality. i-Suite scales to meet the requirements of appliance-based, Software as a Service or virtual machine deployment and adapts to all IT infrastructures.

Bee Ware was founded in 2002 and its European presence is primarily shared among industry, healthcare, finance and public services.
