## **i-Suite: The Core of your Web Application Security**

**Bee Ware now makes unified Web application security and availability a mere formality**

---

Aix en Provence, 23rd March 2010

The information systems of major corporations house a considerable number of applications nowadays, making it both complex and costly to manage important technical features across the full spectrum of products. The intricate configurations involved also have to be adapted and modified each time infrastructure undergoes change.

Bee Ware's solution i-Suite is the pioneering global response that enables overall management of the various issues.

Sitting on a generic platform i-Suite is the only offering on the market that enables, in a user-friendly and unified manner, the administration and delivery of the full range of technical requirements which apply to vertical application infrastructures: security, access control, bandwidth optimisation, high availability, load-balancing, assessment and traffic monitoring.

The common platform also hosts the new centralised Bee Ware administration server, from which i-Suite modules deployed within the infrastructure can be managed. Functions can be accessed via a centralised Java administration console, a Web client, a command-line interface client or a customized client developed by operators using the open API at their disposal.

The benefits for IT organisations are two-fold:

- Single product and centralised management of all features for reduced TCO
- No interfacing required for each server application towards multiple products, hence simplified administration and added infrastructure agility for reduced TTM

The following modules are available in i-Suite:

- Application Security Assessment and Monitoring
- WAF
- Performance Management
- Access Control with Web Single Sign On
- XML Gateway

# PRESS RELEASE

Philippe Léothaud, Bee Ware's CTO : "We've reached the stage where IT organisations have to provide more applications and Web Services more rapidly to more and more users, while maintaining staff and assuring security, performance and the reliability of application infrastructures. Innovative solutions that enable centralised management of all the associated issues are a necessity, and i-Suite is a forerunner of the new trend."

## About Bee Ware:

Bee Ware, the leading provider of secure Web application delivery solutions, assures comprehensive business-smart protection for all organisations. With Bee Ware's integrated solution i-Suite, companies have access to a web application firewall, access control, Web Single Sign On, traffic monitoring and application assessment, a Web Services gateway and centralised management which make significant cost reduction and high-performance a reality. i-Suite scales to meet the requirements of appliance-based, Software as a Service or virtual machine deployment and adapts to all IT infrastructures.

Bee Ware was founded in 2002 and its European presence is primarily shared among industry, healthcare, finance and public services.
