

Press release

BEE WARE enforces its presences on the UK Security Market

Bee Ware moves on and opens new office in London

**Bee Ware presents at Infosecurity Europe (25–27th April - Stand 280),
the Inteliwall Series :
The most complete and comprehensive offer in the application security
market.**

London March 31th 2006

Web applications are currently proving to be one of the most powerful communication and business tool. But they also come with weakness and potential risk that network security devices are simply not designed to protect.

Key security concepts such as Security Monitoring, Attack Prevention, User Access control and Application Hardening, remains true. But, because web application domain is so wide and different, these concepts need to be implemented with new "application oriented" technologies.

The **Inteliwall Series, based on innovative and exclusive technologies**, answers these key questions with a complementary range of products and provides **the most complete Web Security offer**

Inteliwall i-Watch

Application Security Monitoring

Inteliwall i-Defend

Attack Prevention and Vulnerability Detection

Inteliwall i-Sentry

Global Application Firewall

Inteliwall i-Trust

Simple Web Single Sign On

The ICX technology, founded on behaviour analysis and developed by Bee Ware, rests at the heart of this new product range. It allows not only the blocking of attacks, but also the detection of any existing weak-spots in the application code.

The complementary nature of the technologies provides Bee Ware clients and users with first the benefit from the best security technologies, and then from a choice of platforms capable of responding to the various architectural constraints.

Bee Ware will present all these new solutions and features and welcomes you at our **Stand 280**.

About BEE WARE

Bee Ware is the leading provider of Web Application Intelligent Security solutions based on the Intellwall Product Suite that protects any Web Applications from identified and zero-day attacks.

Founded in 2003 by a team of senior experts from Qualys & Check Point, they gather a strong vision and experience in attack-methodology and application awareness. They share a pragmatic approach for security, to design easy-to-use and seamless security solutions that provide maximum security without network constraints or application modifications.

Bee Ware is backed by Sofinnova, one of Europe's largest Venture Capital Risk companies.

Bee Ware Customers are Fortune 1000 companies, Financial Institutions or Web Hosting companies that need to secure their mission critical applications.
